IEMS 381: Supply Chain Modeling and Analysis
Fall 2006

Instructor: Karen Smilowitz
Office: Tech M233
Office Hours: W 4–5, F 2–3, and by appointment.
Phone: (847)491-4693
Email: ksmilowitz@northwestern.edu

Class Time and Location: MWF 10:00-10:50 (Tech LR4)

COURSE DESCRIPTION

This course will provide an introduction to modeling and solution methods for facility location, transportation and inventory management decisions that arise in supply chain analysis.

LEARNING OBJECTIVES

1. To introduce students to the development of mathematical modeling and solution tools for supply chain management;
2. To teach students to use these tools to analyze strategic, tactical, and operational supply-chain decisions including facility location, vehicle routing, and inventory management; and,
3. To engage students in case studies based on real world supply chain decisions.

PREREQUISITES

IEMS 313 or IEMS 310: Students should be familiar with linear programming, including formulating primal and dual linear programming problems, complimentary slackness conditions, and interpretation of the dual problem and variables. Students should be familiar with techniques for solving specialized problems like the shortest path problem and the transportation problem.

COURSE MATERIALS

Course reader, available at CopyCat.

**Course Assessment**

There will be approximately 5 problem sets, 4 case studies, a midterm, and a final exam.

1. Problem sets (15%).
2. Midterm (25%).
3. Final exam (35%).
4. Case studies (20%).
5. Participation (5%). Students are expected to prepare for and actively participate in class discussions.

**Homework Policy**

A due date will be specified on each assignment. Late assignments will not be accepted, except in the most extraordinary circumstances and then only with my prior permission. Problem sets should NOT be submitted through Blackboard unless otherwise noted.

Homework assignments are NOT group projects. If it is clear that you have not completed the assignment on your own, you will not receive credit. In some cases, you may ask your peers for help, in which case you must acknowledge this help in your assignment, "I thank XXX for helping me solve this problem." Failure to follow this model will result in a loss of credit for the assignment.
